

Medical & Laboratory

At Aurora Technologies Inc. (ATI), we have been committed to delivering high quality parts to the medical and laboratory industries since our inception in 1988. As the largest fabricator of plastics in North America, our extensive stock of raw materials means quicker delivery to you.

Plastics are quickly becoming the preferred choice of material for designers due to their nonferrous nature and ability to withstand extreme temperatures, resist water, and hold tight tolerances. By replacing metal components with plastic your company will benefit from longer lasting parts, lighter equipment, a reduction in noise and a more esthetically pleasing look.

To help keep the supply chain as seamless as possible, we recently acquired Polyply Composites and now make many of the materials we fabricate including Polyply's CR900® fume hood liner.

Technology is constantly changing and you need a supplier to keep up with those demands. Aurora Technologies is dedicated to growth and committed to exceeding your expectations.

Typical Applications include:

Magnetic Navigation	MRI/ CT Scanners
Electrosurgical Generators	Fume Hoods

Typical Material:

Polyply composites FR900 fume hood material

NEMA Grade FR-4	Nylon	ABS
NEMA Grade G-10	Acetal	PET
NEMA Grade C	Polystyrene	UHMW
NEMA Grade CE	Polypropylene	PVC
NEMA Grade L		
NEMA Grade LE		
And Many More.
